Alan Zhang

B.S. Computer Science Graduate | 484-506-7558 | alanzhang3434@gmail.com | linkedin.com/in/alanlzhang

OBJECTIVE

Driven Computer Science graduate with a proven track record across 4 technical internships building production-ready features. Expert in Python, React, and cloud architectures, possessing unique, high-level analytical skills honed as a National Master in Chess. Looking to contribute immediate code value to a fast-paced development team.

WORK EXPERIENCE

Software Engineering Intern May - Aug 2026
UKG (Ultimate Kronos Group) Lowell, MA

- Developed and maintained over 100 automated API integration tests for Spring Boot services using Fusion, expanding endpoint test coverage and improving confidence in service reliability.
- Implemented database contract changes across 15 backend services and test environments, coordinating updates across dependent systems to maintain compatibility and prevent integration issues.
- Compartmentalized 4 critical GitHub Actions CI/CD workflows, increasing pipeline reliability and reducing overall build time by 30%.
- Leveraged Claude Code to accelerate test development and debugging while independently validating AI-generated code through testing, review, and established engineering standards.

Software Engineering Co-op Sep - Dec 2025
FactSet Research Systems Inc. Boston, MA

- Developed and shipped an automated comment generation tool using C# and .NET, enabling financial writers to more efficiently analyze and interpret over 100 financial data points when creating content.
- Collaborated closely with more than 10 content writers and designers to gather feedback, refine requirements, and improve the accuracy and presentation of financial information across the product.
- Wrote and optimized SQL queries to support data validation and analytics workflows, helping ensure the accuracy, consistency, and reliability of financial data used by content teams.

Software Engineering Intern May - Aug 2025
UKG (Ultimate Kronos Group) Lowell, MA

- Built an AI-assisted workflow using the Gemini API and Vertex AI to automate the migration of legacy XML-based SoapUI tests to Java REST Assured tests, converting dozens of tests and improving long-term maintainability.
- Automated test pipelines with Jenkins to streamline build verification and regression testing, reducing manual testing effort by 60% and improving the speed and consistency of feedback during development.
- Performed API backend testing and participated in peer code reviews across multiple services and pull requests, identifying issues early and improving test coverage and reliability before deployment.

Software Development Intern Jun - Dec 2024
Saint-Gobain Performance Plastics Wayne, NJ

- Independently built a real-time manufacturing tracking system using Ignition, Java, and Python to address a critical gap in runtime and downtime data collection for production equipment.
- Designed and iteratively improved an intuitive dashboard and operator interface for machine monitoring by incorporating feedback from production, maintenance, quality, and management stakeholders.
- Reduced time spent resolving data discrepancies by 35%, saving more than 20 hours per week and providing teams with more accurate production data to support manufacturing decisions.
- Ensured software maintainability and plant-wide reliability through documentation, code reviews, and iterative refinement based on feedback from end users and technical stakeholders.

SKILLS

Programming Languages: Java, C, C++, C#, TypeScript, JavaScript, HTML, CSS, Python, Swift, LaTeX
Frameworks/Databases: Spring Boot, .NET, React, REST Assured, TestNG, Selenium, MongoDB, MySQL, Microsoft SQL Server, PlanetScale
Developer Tools: Git, GitHub Actions, Gradle, Docker, Jenkins, JetBrains IDEs, Visual Studio Code, Eclipse, Extent Reports, Claude Code, TestRail, Sauce Labs, Selenium Grid, Ignition
Languages: English (Primary fluency), Mandarin (Primary fluency), Spanish (Full professional fluency)

EDUCATION

Northeastern University Boston, MA
B.S. in Computer Science, Minor in Mathematics Sep 2022 - Apr 2026
Honors: Honors Program, Honors Scholarship, GPA: 3.3/4.0

ACHIEVEMENTS

Chess: National Master (NM) – Top 1% of competitive players nationally; demonstrates advanced analytical problem-solving, strategic thinking, and disciplined preparation relevant to software engineering.
